

Appendix 6

Will the decision/proposal impact...	Impact	If an impact or potential impacts are identified			
		Describe impacts or potential impacts on emissions from the Council and its contractors.	Describe impact or potential impacts on emissions across Rotherham as a whole.	Describe any measures to mitigate emission impacts	Outline any monitoring of emission impacts that will be carried out
Emissions from non-domestic buildings?	No impact on emissions				
Emissions from transport?	Increased emissions / impact unknown	Vehicle movements to and from sites will be generated during demolition and construction will create emissions, through the movement of building and waste materials and personnel.	While it is possible that new households will increase vehicle movements, they may also reduce them, depending on where new residents work and access services. We do not know before a development is built where new residents will move from and whether this move will increase or decrease vehicle movements. Some new properties included in the programme, i.e., the homes the Council purchases as strategic acquisitions will be built regardless of whether the Council purchases them or not.	Where appropriate, prospective contractors will be required to demonstrate how they will minimise and mitigate emissions from vehicle movements as part of the construction, during the tendering process. All new housing developments are subject to planning controls and the planning process at the plan and policy development and planning application stages takes into account vehicle movements.	Assessment of whether the new households increase or decrease carbon emissions through vehicle movements is not monitored at this time.
Emissions from waste, or the quantity of waste itself?	Increased emissions	Construction will generate waste materials through demolition, exporting of materials from	Although new households may not necessarily mean more people living in the Borough, they are likely to create a small increase in	Where appropriate, prospective contractors will be required to produce a plan demonstrating how they will minimise and	Where appropriate, we will monitor contractors implementation of wastes minimisation

		groundworks and waste construction materials.	the overall volume of waste created and, in the distance travelled by waste collection vehicles.	mitigate vehicle emissions from the movement of waste, during the tendering process. This will include the recycling / re use of materials on site where possible.	and management plans.
Emissions from housing and domestic buildings?	Increased emissions	No direct emissions increase for the council.	The new properties built as part of the programme will increase emissions from the heating and lighting of the new properties.	<p>The Council will ensure that the new homes are high quality, energy efficient and able to meet the challenge of climate change.</p> <p>The use of modern methods of construction will be considered for all new schemes, where value for money can be demonstrated as well as carbon reduction.</p>	Construction will be monitored to ensure that specifications are met and, where appropriate, the energy performance of new buildings will be monitored once occupied to ensure that the stated performance standards are met.
Emissions from construction and/or development?	Increased emissions	Emissions will be increased from on site vehicles and equipment and the lighting of the sites. Also, from the heating lighting and powering of site offices	<p>Some of the building materials will be manufactured within the Borough.</p> <p>Removal of trees without replacement could,</p>	The use of modern methods of construction will be considered for all new schemes, where value for money can be demonstrated as well as carbon reduction.	This will be monitored through the procurement process.

Appendix 6

Will the decision/proposal impact...	Impact	If an impact or potential impacts are identified

		and cabins. The manufacture of construction materials will increase emissions. It is possible that some mature trees will be removed as part of the development of new sites	depending how they are disposed of, increase carbon emissions.	Where trees are present on a development site they will be retained where possible. The planning process deals with protection of trees on development sites and where it allows their removal usually requires equivalent or better replacement.	
Carbon capture (e.g. through trees)?	Unknown	Some of the Council's own construction projects will include the planting of trees as part of any landscaping schemes	Unknown	N/A	Unknown
Identify any emission impacts associated with this decision that have not been covered by the above fields: N /A					

Please provide a summary of all impacts and mitigation/monitoring measures:

Emissions will be generated from energy use associated with construction sites, the vehicle movements associated with construction personnel, materials and waste. The manufacture of construction materials will also generate emissions. New homes will generate new emissions mainly through lighting and heating and the powering of domestic appliances. These increases will be mitigated through the requirement for prospective contractors to demonstrate how they will reduce emissions from the above and monitored through the construction period. The Council will continue to ensure that new homes are as energy efficient as possible and employ the use of modern methods of construction where value for money can be demonstrated as well as carbon reduction. The actual energy performance of new homes will be monitored to ensure that they meet expected standards.
