

APPENDIX 4

Will the decision/proposal impact...	Impact	If an impact or potential impacts are identified			
		Describe impacts or potential impacts on emissions from the Council and its contractors.	Describe impact or potential impacts on emissions across Rotherham as a whole.	Describe any measures to mitigate emission impacts	Outline any monitoring of emission impacts that will be carried out
Emissions from non-domestic buildings?	No impact on emissions	The sale of the land and the acquisition of new allotment land will have no impact on the Council's greenhouse gas emissions from non-domestic buildings.			
Emissions from transport?	No impact on emissions				
Emissions from waste, or the quantity of waste itself?	Short term increase		There will be a temporary increase in emissions during the construction of the new homes on the site. There are no expected long-term impacts on waste.	N/A	N/A
Emissions from housing and domestic buildings?	No impact on emissions		Construction of new homes on the site will lead to increased emissions from domestic energy use.	N/A	Emissions from energy use in buildings, where the owners of the houses are responsible for energy supply, are not currently within scope of the Council's greenhouse gas

					emissions accounting.
Emissions from construction and/or development?	No significant impact on emissions		There will be a large impact from 'embodied' carbon emissions, from construction materials needed during construction	N/A	N/A
Carbon capture (e.g. through trees)?	No impact on emissions		Development of the site will result in reduced carbon capture.	N/A	N/A
Identify any emission impacts associated with this decision that have not been covered by the above fields: N/A					

Please provide a summary of all impacts and mitigation/monitoring measures:

There are no specific climate impacts associated with the sale of the land and the acquisition of new allotment land, however it is likely there will be some impacts associated with the associated construction works:

- Temporary increase in waste during construction work
- Increase in emissions from construction and development.
- Reduced carbon capture from loss of green space.

Completed by: (Name, title, and service area/directorate).	Tim Hartley, Strategic Asset Manager, Asset Management Service, Finance and Customer Services
Please outline any research, data, or information used to complete this [form].	
If quantities of emissions are relevant to and have been used in this form please identify which conversion factors have been used to quantify impacts.
