

The Environment Agency's surface water flood maps give an indication of the broad areas likely to be at risk of surface water flooding. However, Environment Agency surface water flood maps are not suitable for identifying whether an individual property will flood. This is because the modelling only gives an indication of broad areas at risk, and does not hold information on floor levels, construction characteristics or designs of properties. The information should not be interpreted as showing that the location you are interested in will or won't actually flood, but simply that it is in or not in an area shown at risk on the maps.
