

BCF Scheme:		BCF 08: Improve Pathways and Enables Greater Focus on Prevention
Lead Officer:	RCCG	Dominic Blaydon
	RMBC	Shona McFarlane

Description:

Undertaken a deep dive exercise conducted on cases of high social care and health users. Map the journey through health and social care services to identify opportunities to improve pathways and explore where better preventative action earlier on may help avoid or delay access to health and care services in the future.

Carry out a full evaluation of Rotherham's risk stratification tool, and develop a mechanism for identifying high intensity users of health and social care services.

Outcome:

A shift in investment from high-cost, high-intensity users of health and social care, to low cost high impact community initiatives which focus on prevention.

A co-produced (between health, public health and social care) risk stratification tool to identify high intensity users.

Key Actions	Lead	Timescale
Community Transformation Board (CTB) agree new service model for community nursing services		June 14
CTB agree proposals for pilot project for a 7 day/week integrated discharge support service		Sept. 14
Pilot project implemented as part of Rotherham's winter planning arrangements – Urgent Care Working Group approval		Sept. 14
Evaluation report on outcomes achieved by pilot presented to CTB		April 15
CTB make recommendations on future commissioning arrangements		May 15
BCF Ops Group approval		June 15

BCF Executive approval		June 15
HWB Board approval		July 15
Outcomes		
Reduction in average length of stay for urgent hospital admissions		
Reductions in average length for stay for step down patients to Intermediate Care, The Oakwood Community unit and Breathing Space		
Reduction in admissions from hospital to residential and nursing care
